

The platform behind SRintelligence — humans and AI agents, run as one organization.

An AI-native operating system.

ORQO is the AI-native operating system Syndicated Resources runs its Intelligence pillar on — and the platform we'd point any decision-maker to. Organize the company into **projects**, describe a complex job once, and ORQO assembles a crew of specialist agents — each on whatever model fits — and runs it as a **governed workflow**, again and again, getting sharper every pass. **Enterprise-grade, and built to perform in production, where most agent projects stall.**

- Run thirty with a team of three
- A knowledge graph per project
- One agent, any model
- Governed workflows
- Split-plane security

----- WHERE ORQO SHINES

What sets it apart

MEMORY

Projects that remember

Each project's data becomes a graph that maps how things relate — not just that they do.

- Causal, temporal & didactic chains — every edge typed
- Reason mapped in, not a wiki's "links-to"
- Scientific ontology — 54 types, 48 relations
- Navigated by meaning — and it stays

ANY MODEL

One agent, any model

Each agent keeps its identity across any model — and a stage can run several, talking to each other.

- Context assembled on the fly, provider-neutral
- Many agents per stage — each on its own provider
- Choose what context is shared vs. kept private
- Anthropic, OpenAI, Google — 300+ via OpenRouter

CONTEXT

Context engineering

The hard problem of 2026 isn't the model — it's context. ORQO engineers it.

- Each agent's working memory compacted as it runs
- Only relevant context stays — no catastrophic forgetting
- Bulky results shrink to a stub, expandable on demand
- Up to 4x more work from the same tokens

Built to perform in production. Most agent projects die in the pilot — and the failures trace to the **harness, not the model**: context lost mid-run, no accountability, integrations that only worked in the demo. ORQO is the harness that manages agentic work all the way — also in production.

The integration no catalog has — built on demand. Name a platform — your regional ERP, a machine on the shop floor, the booking system your industry runs on — and the Integration Builder writes the whole connection **both ways** in minutes: the tools your agents call, plus an inbound layer so a workflow fires **the moment an event arrives**. Any system that can POST is integrated today — no code, no ticket, no vendor roadmap.

----- WHAT YOUR TEAM GETS

- **Governed workflows** with human approval gates
- **Built & run in plain language** — or fully in the web UI
- **Reach it by chat or voice**: Slack, WhatsApp, email
- **Specialist agent teams**, built on demand
- **Investor-grade** reports, decks & documents

----- SPLIT-PLANE SECURITY

YOUR DATA, ON A SEPARATE PLANE

- ✓ Control and data run as two separate planes
- ✓ The config plane holds none of your content
- ✓ ORQO cloud, your own cloud, or on-prem
- ✓ Your own keys, private by default — no lock-in

----- HOW SYNDICATED RESOURCES USES IT

We run our Intelligence pillar — **Progressive Due Diligence** and **Pitch Deck Studio** — on ORQO: turning a founder's own documents into investor-grade work, at machine speed, with our experts in the loop. Explore the platform directly at

orqo.ooppps.com.

Humans and AI agents, run as **one organization**.

ORQO is the platform behind SRintelligence — explore it directly at orqo.ooppps.com.
